

THE LEELA PALACES, HOTELS & RESORTS

Technology Stack & the Agentic AI Opportunity

A current-state map of The Leela's digital architecture and a prioritised blueprint for where expert-level, agentic AI workflows can create the most value across the guest journey and operations.

Prepared for

Office of the CIO / Digital & Revenue Leadership

assistants.ai by Ampcome

Date

June 2026

EXECUTIVE SUMMARY

The stack is enterprise-grade. The white space is orchestration.

The Leela runs a modern, alliance-backed technology core. The unlock is not replacing systems — it is placing an agentic intelligence layer across them to convert manual, high-touch workflows into 24/7 autonomous service that protects the luxury standard.

Six lighthouse agentic plays can recapture OTA margin, lift ancillary spend per stay, and compress response times across a portfolio scaling from ~3,550 to 5,000+ keys — without adding the same headcount, and without disturbing the Oracle / GHA system of record.

13 → 23 HOTELS OPERATING, WITH PIPELINE TO ~23 PROPERTIES	~3.5K KEYS TODAY, SCALING TO 5,000+ OVER ~3 YEARS	84 NET PROMOTER SCORE (FY24) — A PREMIUM TO DEFEND	65% PORTFOLIO OCCUPANCY (FY25); ARR ~₹16,400
1. What they run today A GHA-aligned Oracle core (OPERA Cloud + OHIP for loyalty), a Triptease-optimised direct-booking web layer, and Preferred Hotels distribution — mature, API-open, and ready to be orchestrated.	2. Where value concentrates Guest messaging, direct-booking recapture, pre-arrival upsell, MICE / wedding RFPs, loyalty engagement and in-stay service are high-volume, high-margin, and today largely human-paced.	3. How to capture it A no-code agent layer (assistents.ai) sits above the stack via open APIs, with human-in-the-loop guardrails, brand voice control, and graceful escalation to The Leela's butlers and associates.	

The argument in four moves

- The core is not the constraint.** The Leela's loyalty and property systems already sit on Oracle's OPERA Cloud / OHIP open-API platform through Global Hotel Alliance. Agentic flows can read live availability, rates, profiles and loyalty status without rip-and-replace.
- The constraint is human bandwidth at luxury standards.** Concierge, reservations, MICE proposals, review responses and associate training are quality-defining but labour-bound — and they must scale faster than the headcount as the estate grows ~75%.
- Agentic ≠ chatbot.** The opportunity is workflows that act: quoting and closing a direct booking, raising and routing a service ticket, drafting a wedding proposal, recapturing a lapsed loyalty member — not scripted FAQ deflection.
- Sequence for proof, then scale.** Start with low-risk, fast-payback flows (in-stay service, review response, associate copilot), then move to revenue-bearing plays (direct booking, upsell, MICE, loyalty), then to the revenue-management and voice frontier.

The one-line thesis

The Leela does not need more software; it needs an agentic layer that turns its existing Oracle / GHA / Triptease investments into autonomous, brand-safe action — defending an 84 NPS while the portfolio scales to 5,000+ keys.

SECTION 1 · CURRENT-STATE TECHNOLOGY ARCHITECTURE

A mature, alliance-backed stack — mapped by layer and confidence

The Leela publishes little about its internal IT, but its choices are highly legible from its alliance (Global Hotel Alliance), its ownership (Brookfield), its IT leadership (ex-Marriott / IHG / Wyndham), and observable web technology. Below, every component is tagged by evidence strength.

EXHIBIT 1

The Leela technology stack, by functional layer

Guest engagement Web, messaging, app	● theleela.com (direct) ● Triptease (conversion / price assurance) ● Google Optimize ● Crazy Egg (heatmaps) ● Varnish (edge cache) ● jQuery / Web Vitals / HSTS ● WhatsApp / messaging ● Online reputation mgmt
Distribution & revenue CRS, channels, RMS	● GHA shared platform / DISCOVERY rates ● Preferred Hotels & Resorts (GDS / connectivity) ● OTAs (MakeMyTrip et al.) ● Oracle OPERA Cloud Central (CRS) ● Channel manager ● Revenue mgmt system (IdeaS / Duetto class)
Core operations System of record	● Oracle OPERA Cloud PMS ● OHIP (Oracle Hospitality Integration Platform) ● Oracle MICROS Symphony (POS) ● OPERA Sales & Catering (MICE / events) ● Spa & wellness booking
Loyalty & CRM Member intelligence	● Leela DISCOVERY (Silver – Titanium) ● GHA DISCOVERY · ~26M members ● Oracle OPERA Cloud loyalty (GHA migration) ● Guest CRM / CDP ● Email / marketing automation
Enterprise & back office ERP, HR, BI	● Finance / ERP ● Procurement ● HRMS / ATS (LCoE hiring) ● Business intelligence ● Cloud / identity (Brookfield governance)

● Confirmed — public / observable ● Inferred — industry / alliance standard ● Unknown — not disclosed

Why these inferences are safe

Alliance gravity The Leela's loyalty programme runs through Global Hotel Alliance, which has standardised its members' member-intelligence and loyalty operations on Oracle OPERA Cloud + OHIP. Property-level OPERA is the natural, integration-consistent choice.	Leadership DNA The Leela's VP–IT joined in 2022 from Marriott, Wyndham and IHG environments — all deep Oracle Hospitality estates — signalling continuity with OPERA / Symphony tooling and open-API discipline.	Observable web layer The customer-facing stack is directly detectable: a Triptease-driven direct-booking strategy, A/B testing and heatmapping, edge caching and security headers — a deliberately conversion-engineered funnel.
---	--	--

Read: the system of record and loyalty engine are modern and API-open; the customer funnel is already optimised for direct conversion. Both conditions are precisely what an agentic layer needs to plug into — live data to read, and a conversion surface to act on.

SECTION 1 · CONTINUED

System inventory & the agentic hook in each

For every layer, the question is not “what is it” but “what can an agent *do* once connected to it.” The right column is the integration thesis in miniature.

SYSTEM / CAPABILITY	EVIDENCE	ROLE IN THE LEELA	AGENTIC HOOK (WHAT AN AGENT DOES ONCE CONNECTED)
Oracle OPERA Cloud PMS	Inferred	System of record — reservations, profiles, folios, availability.	Read live availability & guest profile; raise service tickets; trigger upsell at the right folio state.
OHIP open APIs	Inferred	Oracle’s integration platform exposing OPERA to partners.	The clean, supported doorway for agents to act on PMS data without custom middleware.
GHA DISCOVERY / OPERA loyalty	Confirmed	Multi-brand loyalty; D\$ currency; 4 tiers; ~26M GHA members.	Recognise members across channels; nudge enrolment, earn/burn, member-rate direct bookings.
Triptease	Confirmed	Direct-booking conversion & price-parity assurance on web.	Pair with a booking agent to answer, reassure on price, and close before the guest leaves for an OTA.
Preferred Hotels & Resorts	Confirmed	Marketing alliance; GDS / global reservation connectivity.	Agent-assisted travel-trade & corporate enquiry handling tied to GDS rates.
OTAs (MakeMyTrip, etc.)	Confirmed	Indirect demand — high reach, 15–25% commission cost.	Direct-recapture agent shifts channel mix; review agent manages OTA reputation.
OPERA Sales & Catering	Inferred	MICE, weddings, conventions (incl. Mahatma Mandir).	Triage RFPs, check space/dates, auto-draft proposals, route qualified leads to sales.
MICROS Symphony (POS)	Inferred	F&B across 67+ restaurants, bars & cafes.	In-chat dining reservations, pre-orders, and contextual F&B upsell.
Spa & wellness booking	Inferred	12+ spas; Soneva collaboration in development.	Pre-arrival and in-stay spa booking and packaging via the concierge agent.
Online reputation mgmt	Inferred	Review monitoring across platforms (noted in market profile).	Draft on-brand responses; cluster sentiment; route operational issues to owners.
HRMS / ATS	Unknown	Talent pipeline — LCoE to induct 3,000+ associates.	Screen, schedule, answer candidate FAQs; accelerate onboarding at scale.
Finance / ERP & procurement	Unknown	Back office across a growing, multi-entity estate.	Invoice capture, three-way match, vendor query handling.

The structural insight

Every revenue-bearing system in the estate is either Oracle-native (OPERA / OHIP / Symphony) or alliance-standardised (GHA, Preferred). That homogeneity is an asset: one well-built integration pattern against OHIP and the GHA platform unlocks the majority of high-value agentic plays across all properties at once.

SECTION 2 · THE AGENTIC OPPORTUNITY

Twelve plays, prioritised by value and feasibility

Each candidate workflow is scored on business value (revenue, margin, NPS, scale leverage) against implementation feasibility (data access, integration depth, risk to the luxury standard). The top-right quadrant is where to begin.

EXHIBIT 2

Agentic AI opportunity prioritisation — value vs. feasibility

Lighthouse (1, 2, 3): revenue-bearing, fast, and integration-ready — the proof-of-value wedge.

Quick wins (6, 9, 10, 12): low-risk, low-data-barrier — ideal to run in parallel for momentum.

Strategic (4, 5, 7): highest value but deeper integration / sensitivity — build toward.

Selective (8, 11): real value, but stage after the core patterns are proven.

Positioning is indicative and intended to drive sequencing discussion, not to assert precise scores. Value and feasibility should be re-weighted against The Leela's own data-readiness, channel economics, and brand-risk appetite in a joint working session.

SECTION 3 · PRIORITY AGENTIC FLOWS

The lighthouse plays, in detail

Each play is an autonomous workflow — a trigger, an action sequence, the systems it touches, and the value it creates — not a chatbot. All run with human-in-the-loop escalation to preserve the luxury standard.

01 Direct-Booking & OTA-Recapture Agent A web- and WhatsApp-native agent that greets high-intent visitors, answers rate / room / policy questions in natural language, surfaces the best available direct rate (including the DISCOVERY member rate), reassures on price — reinforcing the existing Triptease layer — and closes the booking before the guest defects to an OTA. Re-engages cart abandoners with a tailored follow-up. TRIGGER High-intent web session, price-page dwell, or inbound WhatsApp. SYSTEMS Booking engine / OPERA Cloud Central · Triptease · DISCOVERY rates · payments (PCI-compliant handoff). LIGHTHOUSE WHY IT WINS Every shifted room-night avoids 15–25% OTA commission and builds a first-party guest relationship. Direct-booking shareLook-to-bookOTA commission savedAbandonment recovery
02 Pre-Arrival Personalisation & Upsell Agent From confirmation to arrival, the agent curates the stay: offers room upgrades at dynamic prices, books airport transfers, pre-reserves spa and signature dining, and detects occasions (honeymoon, anniversary, milestone) to trigger celebratory rituals — The Leela's signature. Hands a structured arrival brief to the butler / front office. TRIGGER Booking confirmed; T-minus windows before arrival. SYSTEMS OPERA profile & reservation · spa / F&B booking · CRM · payments. LIGHTHOUSE WHY IT WINS Ancillary revenue per stay and a measurably warmer arrival — both NPS and margin accretive. Upsell attach rateAncillary %stayUpgrade conversionArrival-readiness
03 In-Stay Digital Butler & Service-Request Agent A multilingual, 24/7 in-stay companion over WhatsApp / in-room QR / app that handles requests — extra amenities, housekeeping, maintenance, late checkout, dining — by <i>raising and routing tickets</i> to the right team in OPERA, tracking to resolution, and escalating to a human butler the instant nuance or VIP sensitivity is detected. TRIGGER Any in-stay guest message, on any channel. SYSTEMS OPERA / service ticketing · housekeeping & maintenance queues · F&B. LIGHTHOUSE WHY IT WINS Absorbs routine volume so butlers focus on high-touch moments; cuts response time at scale. First-response timeRequest resolutionIn-stay NPSLabour deflection
04 MICE / Weddings / Group RFP Agent Inbound event, wedding and conference enquiries are triaged the moment they arrive: the agent qualifies budget, dates, pax and intent, checks space and date availability in Sales & Catering, drafts a first proposal with indicative pricing, and routes a warm, qualified lead to the events team — with no high-value enquiry left waiting overnight. TRIGGER Web RFP form, email, or WhatsApp event enquiry. SYSTEMS OPERA Sales & Catering · CRM · email · document generation. STRATEGIC WHY IT WINS MICE & weddings are core to The Leela; speed-to-first-response is the single biggest driver of group conversion. RFP response timeLead qualification rateGroup conversionEvent revenue

SECTION 3 · CONTINUED

Strategic and quick-win plays

Beyond the lighthouse set, these workflows extend the agentic layer into loyalty, reputation, revenue, voice and the back office — several of them low-risk enough to run in parallel from day one.

05 Loyalty (DISCOVERY) Engagement Agent

STRATEGIC

Drives enrolment, explains D\$ earn-and-burn in plain language, surfaces member Experiences and Local Offers, and re-activates lapsed members with personalised, member-rate direct-booking nudges — deepening The Leela's share of the ~26M-member GHA base.

SYSTEMS

GHA DISCOVERY / OPERA loyalty · CRM · messaging.

WHY IT WINS

Member-direct revenue is the highest-margin demand channel.

Enrolment rate

Member direct share

Lapsed reactivation

06 Reputation & Review-Response Agent

QUICK WIN

Drafts on-brand, individually-tailored responses to reviews across OTAs and Google, clusters recurring sentiment themes by property, and routes genuine operational issues to the accountable owner — preserving voice while removing a heavy manual load.

SYSTEMS

ORM platform · OPERA stay data · ticketing.

WHY IT WINS

Low data barrier, fast to deploy, protects ranking & reputation.

Response coverage

Response time

Review score trend

07 Revenue & Rate-Parity Intelligence Agent

STRATEGIC

Continuously monitors comp-set rates, demand signals and channel parity; flags parity breaches; and prepares explained rate-move recommendations for revenue managers to approve — an analyst-in-a-loop, not an autopilot, given pricing sensitivity.

SYSTEMS

RMS · rate-shopper / Triptease · CRS.

WHY IT WINS

Protects RevPAR and parity discipline across a growing estate.

Parity-breach time-to-fix

RevPAR

Analyst hours saved

08 Reservations Voice Agent

SELECTIVE

An AI voice agent for the reservations lines — handling after-hours and overflow calls, qualifying intent, quoting availability, and either booking or warm-transferring to a human, in English and Indian languages. A natural fit given The Leela's multi-property toll-free footprint.

SYSTEMS

Telephony (Twilio / Exotel class) · CRS / OPERA.

WHY IT WINS

Captures demand currently lost to unanswered or queued calls.

Call answer rate

Voice-to-booking

After-hours capture

09 · Corporate & Travel-Trade Sales Agent

Supports B2B sales: account research, corporate-rate RFP responses, and structured follow-ups feeding the CRM — a force-multiplier for the sales team. **Quick win.**

10 · HR / Talent-Pipeline Agent

Screens applicants, schedules interviews and answers candidate FAQs to accelerate the LCoE goal of inducting 3,000+ associates as the estate scales. **Quick win, timely.**

11 · Finance / AP & Procurement Agent

Invoice capture, three-way matching and vendor-query handling across a multi-entity, multi-property back office. **Stage later.**

12 · Associate Knowledge Copilot

An internal agent over brand SOPs, the "Leela Dharma" service standards and butler training — consistency and faster ramp for every new property and hire. **Quick win.**

SECTION 4 · INTEGRATION ARCHITECTURE

An orchestration layer — not another silo

The agentic layer sits *above* the system of record, reads and acts through open APIs (OHIP, GHA, Triptease), and always escalates to a human when the moment calls for it. Nothing is ripped out; everything is made to act.

EXHIBIT 3

Where assistants.ai sits in The Leela’s stack

Five design principles

Read-then-act, with approval

Agents act autonomously on routine, reversible steps; anything pricing-sensitive, VIP, or irreversible routes to a human for one-tap approval.

Brand voice as a control

The Leela’s tone, rituals and service language are encoded as guardrails — the agent never sounds generic, and never off-brand.

One pattern, all properties

Because the core is Oracle / GHA-standard, a single integration pattern scales across 13 → 23 hotels without bespoke rebuilds.

Graceful human handoff

Escalation is a feature, not a failure: butlers and associates inherit full context, never a cold transfer.

Privacy & auditability

Every action is logged and explainable — aligned to Brookfield-grade governance and India’s DPDP expectations.

No rip-and-replace

The system of record stays Oracle. The agentic layer adds action and availability — it does not compete with the PMS.

SECTION 5 · IMPLEMENTATION ROADMAP

Sequence for proof, then scale

A horizon-based rollout: prove value fast on low-risk flows, move to revenue-bearing plays once the integration pattern is trusted, then extend to the revenue and voice frontier.

EXHIBIT 4

Three-horizon agentic AI roadmap

Horizon 1 · Prove	Horizon 2 · Monetise	Horizon 3 · Extend
~0–3 MONTHS ● In-stay digital butler — one flagship property as pilot. ● Review-response agent — portfolio-wide, low risk. ● Associate knowledge copilot — SOPs & service standards. ● Foundation: OHIP / GHA connection pattern, brand-voice guardrails, escalation design.	~3–9 MONTHS ● Direct-booking / OTA-recapture agent — web + WhatsApp. ● Pre-arrival upsell agent — ancillary revenue. ● MICE / wedding RFP agent — group conversion. ● Loyalty DISCOVERY agent — member-direct share.	~9–18 MONTHS ● Revenue / rate-parity intelligence — analyst-in-loop. ● Reservations voice agent — after-hours & overflow. ● HR / talent-pipeline agent — scale hiring with LCoE. ● Finance / AP & procurement — back-office efficiency.

Indicative value at stake

Directional only — to frame the size of the prize, not to promise an outcome. Each lever must be calibrated against The Leela's actual channel mix, cost base and data-readiness.

LEVER	MECHANISM	WHERE IT SHOWS UP
Channel-mix shift	Direct & member bookings displace OTA room-nights.	15–25% commission avoided on every shifted night; richer first-party data.
Ancillary uplift	Pre-arrival & in-stay upsell of upgrades, spa, dining, transfers.	Higher ancillary ₹ per occupied room; total-revenue RevPAR.
Group conversion	Faster, qualified RFP response on MICE & weddings.	Won events that would otherwise lapse to a slower competitor.
Labour leverage	Routine volume absorbed; associates redeployed to high-touch service.	Service capacity scales with keys, not linearly with headcount.
Experience & NPS	Instant, multilingual, 24/7 response across the journey.	Defends the 84 NPS — the brand's pricing-power moat.

SECTION 6 · RISKS, GUARDRAILS & METHOD

What could go wrong — and how to contain it

In luxury, a single off-brand or wrong-fact interaction costs more than the efficiency it saves. The guardrails below are non-negotiable design requirements, not afterthoughts.

Brand-voice drift

A generic or tone-deaf agent erodes the luxury standard. **Mitigation:** encode Leela tone & rituals as guardrails; staged human review before full autonomy; VIP segments always human-led.

Hallucination on facts / price

Wrong rate, policy or availability damages trust. **Mitigation:** agents quote only from live OPERA / CRS data; pricing actions are approval-gated, never invented.

Data privacy & DPDP

Guest and member data carry regulatory and reputational risk. **Mitigation:** least-privilege API scopes, full audit logging, no data egress beyond governed connectors.

Integration dependency

Reliance on OHIP / GHA / partner APIs. **Mitigation:** build to documented open APIs; design graceful degradation and human fallback for every flow.

Channel-conflict & parity

Aggressive direct-recapture can strain OTA relationships. **Mitigation:** respect parity rules; position as service, not undercutting; revenue team owns rate policy.

Associate adoption

Tools fail if teams distrust them. **Mitigation:** position agents as butler-assist, not replacement; co-design with operations; clear escalation paths.

Method & confidence

This report synthesises public sources (June 2026) with hospitality-technology pattern analysis. Components are tagged **Confirmed** (publicly observable), **Inferred** (industry / alliance standard, high confidence) or **Unknown** (not disclosed). Where a system is inferred, it is the integration-consistent and leadership-consistent choice — but should be validated directly with The Leela's IT team before build. Value figures are directional framing, not commitments.

Primary sources

The Leela / Schloss Bangalore: corporate "About" and press materials; Leela DISCOVERY programme pages; Schloss Bangalore RHP / abridged prospectus and IPO disclosures (FY25 ARR ~₹16,409, RevPAR ~₹10,696, 65% occupancy; FY24 NPS 84; 13 hotels / ~3,550 keys; pipeline to ~23 hotels / 5,000+ keys; ~4,400 employees; LCoE 3,000+ associates).

Technology signals: third-party market profile listing the observable web stack (Google Optimize, Crazy Egg, Varnish, Triptease, jQuery, Web Vitals, HSTS) and ORM activity; The Leela VP-IT appointment (ex-Marriott / Wyndham / IHG).

Alliance & platform: Global Hotel Alliance DISCOVERY programme (~26M members, 45 brands) and its migration of member-intelligence / loyalty operations to Oracle OPERA Cloud + OHIP; Preferred Hotels & Resorts marketing alliance.

Industry context: 2026 hospitality-technology and conversational / agentic-AI landscape references on PMS, CRS, RMS, guest-messaging and AI-concierge patterns.

Recommended next step

A focused working session with The Leela's CIO office to (1) confirm the inferred core, (2) select two Horizon-1 pilots on a single flagship property, and (3) stand up the OHIP / GHA integration pattern that unlocks the rest of the roadmap across the portfolio.

Prepared as a discussion document by assistants.ai (Ampcome). Confidential. Figures and system inferences to be validated with The Leela prior to any build decision. June 2026.
